World Compensation System (WCS)

Keywords: #2020, #Blockchain, #InternetOfValue, #RSK, #DeFi, #DeFi-App, #DFApp, #wcsDFApp

Classification: DeFi : EcoSystem : @rif_os : **Version**: 0.0.1 (2020-01-15)
Status: *in work*

Purpose

Simple. Eliminate money invisibility.

User-story

> I dare you to throw out all your money, all your papers and coins and individual national currencies, and start over.
>
> Develop an international monetary system that is wide open, totally visible, immediately traceable, completely accountable. Establish a Worldwide Compensation System by which people would be given Credits for services rendered and products produced, and Debits for services used and products consumed.
>
> Under the new Worldwide Compensation System, WCS, the transfer of Debits and Credits would be immediate and totally visible. That is, anybody and everybody could inspect the account of any other person or organization at any time. Nothing would be kept secret, nothing would be 'private'
>
> Everything would be on the system of Credits and Debits. Returns on investments, inheritances, winnings of wagers, salaries and wages, tips and gratuities, everything. The WCS would deduct 10 percent of all earnings each year from the income of those *voluntarily requesting* such a deduction. Everyone in the society would be able to observe who was choosing to offer the 10 percent for the general good of all, and who was not. And everyone's records would be open to everyone else. And nothing could be purchased without Credits. There would be no other negotiable currency. ([source:#CWG, @realNealWealsh](http://ISBN))

Short-name: WCS, DeFiApp, wcsDFApp

World Compensation Operating (Eco-)System

Use-cases

- Value creation (energy-flow)
- Development of services
- Production or products
- Labour/Work

Extended Use-cases

- Energy eXchange

Decentralised Finances (DeFi)

- Taxation
- Borrows/Loans

Community

- [@WorldCompensationSystem (Twitter)](https://twitter.com/WorldCompensationSystem)

Applications

/apps:

```
/apps/App1 -- Local App1 executable
/apps/<Domain>/App1/spec -- (external) interface specification
/apps/<Domain>/App1/src -- source code
/apps/<Domain>/App1/test -- test
```

List of supported Application(s)

- wcsUTelnet - Telnet (status:*planned*)
- wcsPFtp - wcs:Protocol interpreter : File-Transfer (status:*planned*)
- wcsPHtpp - HTML eXchanger (status:*planned*)

Dependencies /lang - implementation language specific files

Application Notes

Digital signatures

```
49bf9fabbb31ca80119c72109b914708  ./apps/README.md
```

Document	MD5-Checksum
README.md	49bf9fabbb31ca80119c72109b914708 apps/README.md

Distributed Apps

/dapps:

```
/dapps/DApp1 -- Distributed App1 executable
/dapps/<Domain>/DApp1/spec -- (external) interface specification
/dapps/<Domain>/DApp1/src -- source code
/dapps/<Domain>/DApp1/test -- test
```

List of native DFApp(s)

- wcsDFAppDeductor {src, dst} - Deduces 10% from src *monthly* into dst (status:*planned*)
- wcsDFAppTemplate - WCS network DFApp Template (status:*planned*)

List of registered third-party DFApp(s)

Application Notes

Digital signatures

```
8bac8aaca025fbaed5d9753a66a1b7cd  ./dapps/README.md
```

Document	MD5-Checksum
README.md	8bac8aaca025fbaed5d9753a66a1b7cd dapps/README.md

Commands

/commands:

```
/commands/Cmd1 -- Command1 executable
/commands/Cmd1/spec
/commands/Cmd1/src
```

List of supported Commands(s)

- wcsUStatus - Echo (status:*planned*)

Application Notes

Digital signatures

```
edf88082867feb04d7cd8796b39561a3  ./commands/README.md
```

Document	MD5-Checksum
README.md	edf88082867feb04d7cd8796b39561a3 commands/README.md

Operations

/operations:

List of native (off-the-shelf) Operation(s)

- operation - Echo (status:*planned*)

Application Notes

Digital signatures

```
227488574263a442dfc666513ef23f0c  ./operations/README.md
```

Document	MD5-Checksum
README.md	227488574263a442dfc666513ef23f0c operations/README.md

Tools

/tools:

List of native (off-the-shelf) Tool(s)

- wcsUPing - wcs:Util : Ping (status:*planned*)
- wcsUEcho - Echo (status:*planned*)

Application Notes

Digital signatures

```
d89cf07d2b13a22deec08c0c4ed9266e  ./tools/README.md
```

Document	MD5-Checksum
README.md	d89cf07d2b13a22deec08c0c4ed9266e tools/README.md

Services

/services:

List of supported System-Service(s)

- wcsServer - World Compensation System server (status:*planned*)

Digital signatures

```
086f662610232b3d3c823e5af2138bce  ./services/README.md
```

Document	MD5-Checksum
README.md	086f662610232b3d3c823e5af2138bce services/README.md

Architecture

/arch:

Concept

Create a World Compensation Ecosystem based on Decentralised Financial Applications.

Implementation:

- Operation System (including fs, dfs, time-shared applications)

wcsOS – linux based distribution

Layers:

1. Distributed peer-2-peer (P2P) Network (Blockchain based)
2. Distributed File system (dfsWcs)
3. Nodes are Servers
4. Servers
    1. run System- and Users-services
    2. route User- and System- interactions (transactions)
5. Users are Clients
6. Clients decide to participate or not (mounting/unmounting) as service suppliers in the network
7. Clients interact with other Clients
8. Clients request services from Servers (service suppliers)
    1. Via Remote Procedure Call (RPC) returning values in JSON format
9. Clients transfer value-assets to single or multiple-users or services

10. Light-Clients connect and use the network only for short-time (SMS, PPP)
11. Value-assets are represented via Addresses in the Distributed File system
12. Clients and Servers interact via read/write file operations with eachother
13. Servers providing User-services are debted certain agreed amount per-use
14. Servers providing System-services are debted an agreed amount per-use, daily, monthly or yearly on donation basis

Network

Topology: Flower or Tree-of-Life (sacred geometry star 1:N, N:=6) * https://en.wikipedia.org/wiki/Overlapping_circles_grid#Modern_usage

Nodes:

```
Full-nodes:
 - store the complete history of command-blocks (analog to batch-files (a.k.a transactions))
Light-nodes:
 - store, validate and reconstruct environment from all nodes in local network (only) -- bis
```

Local File-system

Refer to /arch/fs

Remote (distributed) File-system

Refer to /arch/dfs

Realisation

TCP/IP Server :port UNIX's "Everything is a File" -> (name:Address) - Network (distributed) File-System

Support Tools

- neo4j - Graph Database
- jslinux - Web-Browwer Linux
- 128-bit OS - 128-bit RISC OS
- quickjs - Embeddable Javascript engine

Refer to support tools.

Network Startup

```
$wcsStart &
World Compensation System server (wcss) running
Listening on port:280182

$wcsStatus
Status: OK
```

Command, Services and Tools

- bin - Local commands, services and tools
- dbin - Distributed (Remote) user-commands and user-tools

Application Notes

- apps - Local commands, services and tools
- dapps - Distributed (Remote) User-services

Digital signatures

Whitepaper – WCS - published by: wcs:root : Sat Jan 18 20:03:51 CET 2020 # Glossary

- term - short explanation

Definitions

Assets:

Work-product (document, software application, drawing (diagram), picture) that was created and can be: - stored, - used (executed, applied to), or - exchanged (ownership transfer: lend/borrow, inheritance, etc.)

Value:

The intrinsic 'cost' of producing and using a given asset - *universal* unit of credit: cost (node operation cost) - present value: (development + production cost) - future value: (service cost) – reputation based

Transaction (Asset (Credits or Debts)-value Transfer): - Blockchain->Browser->Distributed File-System->Local File-System->Blockchain->Remote File-System

1. User->Client (Application)
2. Client->Browser
3. Browser (Peer)-to-(Peer)-Network (Blockchain)
4. ...

Credits:

credit - a given amount granted in exchange of local-resource-time (normally computing power or manual labour) consumption/usage - run a service in a remote:node

Debits:

debit - crediting unit referring the used time during required computation - debiting-time - time used during computation * fix cost (internet, electricity) - visibility (production cost, service price), e.g. (2,34)

Services:

service - an action executed virtually (software) or physically (hardware) - eg. (software:x386:server) hashvalueof bigfile.bin - (hardware:raspberrypi:io) getoutsidetemp
