Whitepaper - WCS - published by: wcs:root : Sat Jan 18 17:51:05 CET 2020 # World Compensation System (WCS) **Keywords**: #2020, #Blockchain, #InternetOfValue, #RSK, #DeFi, #DeFiApp, #DFApp, #wcsDFApp

 $\textbf{Classification:} \ \ \text{DeFi: EcoSystem: @rif\_os: } \textbf{Version: } 0.0.1 \ (2020\text{-}01\text{-}15)$ 

Status: in work

# Purpose

Simple. Eliminate money invisibility.

# **User-story**

I dare you to throw out all your money, all your papers and coins and individual national currencies, and start over.

Develop an international monetary system that is wide open, totally visible, immediately traceable, completely accountable. Establish a Worldwide Compensation System by which people would be given Credits for services rendered and products produced, and Debits for services used and products consumed.

Under the new Worldwide Compensation System, WCS, the transfer of Debits and Credits would be immediate and totally visible. That is, anybody and everybody could inspect the account of any other person or organization at any time. Nothing would be kept secret, nothing would be 'private'

Everything would be on the system of Credits and Debits. Returns on investments, inheritances, winnings of wagers, salaries and wages, tips and gratuities, everything. The WCS would deduct 10 percent of all earnings each year from the income of those voluntarily requesting such a deduction. Everyone in the society would be able to observe who was choosing to offer the 10 percent for the general good of all, and who was not. And everyone's records would be open to everyone else. And nothing could be purchased without Credits. There would be no other negotiable currency. ([source:#CWG, @realNealWealsh](http://ISBN))

Short-name: WCS, DeFiApp, wcsDFApp

# Architecture

## Concept

Create a World Compensation Ecosystem based on Decentralised Financial Applications.

Implementation: Operation System (including fs, dfs, time-shared applications)

wcsOS - linux based distribution

Layers: 1. Distributed peer-2-peer (P2P) Network (Blockchain based) 1. Distributed File system (dfsWcs) 1. Nodes are Servers 1. Servers 1. run System- and Users-services 1. route User- and System- interactions (transactions) 1. Users are Clients 1. Clients decide to participate or not (mounting/unmounting) as service suppliers in the network 1. Clients interact with other Clients 1. Clients request services from Servers (service suppliers) 1. Via Remote Procedure Call (RPC) returning values in JSON format 1. Clients transfer value-assets to single or multiple-users or services 1. Light-Clients connect and use the network only for short-time (SMS, PPP) 1. Value-assets are represented via Addresses in the Distributed File system 1. Clients and Servers interact via read/write file operations with eachother 1. Servers providing User-services are debted certain agreed amount per-use, daily, monthly or yearly on donation basis

#### Network

**Topology**: Flower or Tree-of-Life (sacred geometry star 1:N, N:=6) \* https://en.wikipedia.org/wiki/Overlapping\_circles\_grid#Modern\_usage

#### Nodes:

Full-nodes: store the complete history of command-blocks (analog to batch-files (a.k.a translight-nodes: store, validate and reconstruct environment from all nodes in local network (or

# Local File-system

```
/ - WCS root Ecosystem
/commands
/dbin/ - Decentralised System services
/users/ - connected user addresses {publickey:addresshash:alias:inbox} (analog to /mnt)
/apps
/lang - implementation language specific files
/tools - Utility tools
/dapp/ - Decentralised User or Third-Party Applications (executable -- analog to /usr/bin)
```

### Remote (distributed) File-system

```
/arch/dfs
/dapp/DeFi/ - Decentralised Financial Apps
```

### Realisation

TCP/IP Server :port UNIX's "Everything is a File" -> (name:Address) - Network (distributed) File-System

### **Support Tools**

- neo4j Graph Database
- jslinux Web-Browwer Linux
- 128-bit OS 128-bit RISC OS
- quickjs Embeddable Javascript engine

Refer to support tools.

## **Network Startup**

```
$wcsStart &
World Compensation System server (wcss) running
Listening on port:280182
```

\$wcsStatus
Status: OK

## Command, Services and Tools

- bin Local commands, services and tools
- dbin Distributed (Remote) user-commands and user-tools

## Application Notes

- apps Local commands, services and tools
- dapps Distributed (Remote) User-services #### Digital signatures
